THE ABC OF ARP 2: Bombs

View the film *The ABC of ARP 3: Bombs* before beginning these activities. You may find it helpful to watch some parts of the film again as you fill in the answers. This film explains the three types of bombs that the enemy could drop on Australia, the best way to protect your family, how to use sandbag walls and sandbag fire bags, how to move through a burning building and how to move an unconscious person to safety.

1. **Distinguishing Between Bomb Types** –
   Label each illustration with the correct name for the type of bomb shown. Choose from the following names: anti-personnel (fragmentation), high explosive, incendiary.

2. **True or False?** – After viewing the film (or while you view it), circle True or False for each of the following statements. Cross out and rewrite the incorrect part of each false statement.

   1. Anti-personnel bombs explode under the surface of the earth. T / F
   2. Fragments from anti-personnel bombs can injure someone standing up to ¾ mile (nearly a kilometre) away. T / F
   3. To avoid injury from an anti-personnel bomb when outdoors, run away. T / F
   4. High explosive bombs are designed to cause fires. T / F
   5. High explosive bombs are also known as demolition bombs. T / F
   6. High explosive bombs explode on the surface of the earth. T / F
   7. A high explosive bomb causes damage partly because of the vacuum and suction it creates. T / F
   8. Incendiary bombs are also known as fire bombs. T / F
   9. The safest way to put out an incendiary bomb is to throw a bucket of water on it. T / F
   10. A sandbag will not put out an incendiary bomb because the fire will burn it. T / F

3. **Roleplay** – Imagine that you are in a burning building and have found an unconscious person. Using the film as a guide, demonstrate with a partner how to move this person out of the building.
